

Quality commitment:

Loco-Rehab clinic is an ISO 9001:2008 certified clinic. At Loco-Rehab our goal is to help patients get rid of their diseases or deformities by proper diagnosis, treatments & follow-up programs, so that they live as independently as possible. Whether our patients want to walk comfortably in their home, spend the day outdoors with their family or run marathons, we will work with them every step of the way and make their dream a reality. We provide each patient with extensive clinical education along with the support and encouragement needed to pursue personal goals.

Apart from our specialized services mentioned inside, we also deal with the following services:

- Low back pain solutions including prevention and correction
- Cosmetic restoration (Anaplastology)
- Compression Therapy
- Functional Fracture Bracing
- Post Burn hand splinting
- Mobility solution for paraplegics or quadriplegics
- Mastectomy care & breast prosthesis
- Acute or chronic Ankle sprains
- Cumulative trauma disorders
- Ergonomic consultancy
- Neuro-prosthesis for upper motor neuron disorders
- Nutritional supplements

Follow-up and services are available through out the world:

In India:

- New Delhi
- Mumbai
- Ahmedabad
- Bengaluru

Orthotic & Prosthetic Services
Physical Therapy

HOW A CLINICAL CUSTOMIZATION IS DONE FOR AN ORTHOSIS/PROSTHESIS?
 Our Lab work consists of taking an appropriate cast via plaster bandage/synthetic cast/impression foam/alginate; of the deformed/diseased/residual part followed by molding & mold modification (this is done to achieve appropriate biomechanical alignment). The mold is then subjected to vacuum lamination either via high grade thermoplastics or carbon reinforced fiber, followed by trimming, finishing and strapping. These procedures require a few days for completion, by our specialized clinicians and technicians.

Our speciality treatments:

Pediatric Orthopedic deformity management:

Do you know?
 According to the Rehabilitation Council of India (RCI), children with deformities and disabilities should only be attended by a Clinician certified under it. Early intervention can prevent deformities without the need of surgeries in future.

Foot & Ankle deformities and diabetic ulcer management:

Do you know?
 Apart from diabetes, most foot deformities are caused due to improper foot wears and faulty walking pattern, and all of them do not respond to any drug. Around 90% of Low Back pain & knee pain is due to improper foot alignment.

Knee pain due to osteoarthritis or ligament injury:

Do you know?
 Knee joint is one of the most complex joints of our body, with variable centers of rotation and supported by almost 10 ligaments. Acute Osteo-arthritis can be treated by proper bracings, therapeutic measures and life style modifications.

Prosthetic Rehabilitation:

Do you know?
 Prosthetic replacements are one of the most researched subjects in the world, bionic limbs are already developed those can sense temperature, touch and follow our command. A Prosthetist role; played by Morgan Freeman, is best shown in the movie, 'The Dolphin Tale'.

In Greek legend, the Sphinx devoured all travellers who could not answer the riddle it posed: "What is the creature that walks on four legs in the morning, two legs at noon and three in the evening?" The hero Oedipus gave the answer, causing the Sphinx's death. Do you think you know the answer, if not, read the column on the fold written by our founder to get the Clue.

From the founder's pen:

Hello, no matter who you are, if you have gone through this small "know how" of our clinic, you might

Dr. Suman Kr. Panda
 Founder & Clinical
 Orthotist - Pedorthist

have known that we are a specialized clinic and may be the only one to serve you from this part of India. This clinic is dedicated to my father, Late Prof. Dr. Nilambar Panda, a scientific healer, who has treated many patients suffering from various ailments during his lifetime, his philosophy has become our motto; "try not be a man of success but a man of values". We are here to make differences in the society either by proper preventive methods or via specialized treatments. Our modes of treatment are more on the intellectual level of any individual, we strongly believe that if a patient is fit mentally, medicines merely do matter. Our body has the capacity to heal itself, our brain can produce any drug it wants to.

The prime treatment principle of any orthopedic disease or deformity is to maintain natural alignment and to restrict any harmful moments. The answer to correct treatment protocol lies deep within the deformed or diseased part, we help ourselves to reveal this secret by appropriate logic and analysis. We are no rocket scientists here, every problem has a simple solution, many times we often try to complicate it. Nobody is really diseased until he/she starts thinking to be the one. Believe the nature who has created you, we can only help you; show the path, no matter who you are, a child crawling with four limbs or an adult walking bipedal or a geriatric with walking stick.
